Hi Jarrod,

I appreciate your providing this information. As we discussed earlier, I asked my hydrologist to recommend some additional on-site groundwater monitoring within OU-1 (Craig Road Landfill [CRL]) to better understand potential sources and transport of PFOS/PFOA in the vicinity of the municipal wells. His analysis and recommendations are attached. It's not clear from the map you provided that any Air Force CRL monitoring wells are being considered for sampling in Phase 3. While I understand the current focus is to identify and respond to potentially impacted water supplies, I would strongly recommend using these existing monitoring wells to help guide the investigation.

Thank you,

Kim

This e-mail contains FOR OFFICIAL USE ONLY (FOUO)

Kim,

Please find attached a map showing the qualitative results from the Phase 1 and 2 sampling, as well as the areas we are looking to sample in Phase 3. Please note that this map is NOT FOR RELEASE (labeled as For Official Use Only), but for internal use only.

Phase 3 will include the on-base monitoring wells shown on the map in the northeast corner of the base. Based on your request and input (thank you!), the next wells to be sampled will be off-base monitoring wells associated with the Craig R. Landfill (including MWs in the 4A area on the map). Following those samples, we will be potentially looking to sample private wells and inactive municipal wells in the 4A area.

Let me know if you have any questions or concerns.

Jarrod Case, P.E.
